HeliAir Sweden AB Environmental Policy

HeliAir Sweden AB operates helicopters for wildfire suppression, power-grid work, defence support, specialised lifts and passenger flights, mainly in Scandinavia. Through openness and commitment to environmental issues we want to earn the confidence of customers, owners, employees, the public and authorities.

Our significant environmental aspects are: fuel consumption and the emissions from flight operations; noise around our bases and operating sites; hazardous substances and waste from maintenance; fuel storage and the risk of spillage; and energy use at our facilities.

We commit to:

- comply with environmental law and the other environmental requirements that apply to us;
- measure, monitor and work to reduce our greenhouse gas emissions, and work with continual improvement and environmental objectives that are followed up every year;
- prevent pollution and spills, and handle hazardous substances and waste responsibly;
- plan flight paths, timing and ground runs to reasonably minimise noise, and respect protected areas and nesting seasons;
- consider the environmental impact of new activities in advance;
- train, inform and involve our staff in our environmental work;
- place equivalent environmental requirements on our suppliers and contractors;
- be open about our environmental work and impact.

The CEO is accountable for our environmental work. It is built on our register of environmental aspects, our monitoring of fuel use and emissions, our chemical register, our spill response instruction and the routines in the Corporate Manual, and we are developing it into a complete environmental management system.

How we communicate: internally through Icarus (Operative Information and news), induction and the Code of Conduct training; externally through our website, our reporting to customers and owners, and on request. This policy is public and available to anyone who asks.

This policy is reviewed every year in the management review, together with the environmental objectives.
